

HARRINGTON OPERA HOUSE SOCIETY
BUILDING COMMITTEE ANNUAL REPORT
NOVEMBER 2, 2015

Again this year the building projects completed brought dramatic changes to our building.

- A new main stage curtain was altered and installed on the new track system, changing the look of the stage dramatically.
- The walls of the auditorium were painted after the proscenium and wall plaster was repaired.
- The millwork of the auditorium, including the doors under the stage, was cleaned, repaired and refinished.
- The entire auditorium and stage floors were cleaned, repaired, resurfaced, sealed and finish coated.
- New sun blocking shades were installed on all windows in the auditorium and blackout shades installed in the art/music room.
- A new ADA compliant rest room has been framed, wired and plumbed on the second floor and awaits L&I inspection for completion.
- Plumbing and wiring has been roughed in to the snack area and also awaits inspection for completion.
- The most time consuming task has been working with the architects and engineers, determining the location and design of an elevator in the building with funds provided by the Direct Appropriation from Commerce Community Capital Facilities grant. The final design is complete for the elevator and all ADA accesses. The project bid request packages are being sent out with bids to be received by November 20, 2015.
- The building committee would like to thank everyone for their encouragement and support and hundreds of hours labor provided this year to make all these projects happen.

Sincerely,

GORDON HERRON
